

Helius Medical Technologies, Inc. Announces Claim Authorization by CignaHealth, for its Portable Neuromodulation Stimulator (PoNS®) Device

June 16, 2025 11:00 AM EDT

- CignaHealth becomes fifth major payer to authorize claim for PoNS Device at out-of-network adjusted negotiated list price of \$19,161-

-This follows another recent authorization by Anthem Multiplan for PoNS Device at out-of-network negotiated price of \$19,160-

NEWTOWN, Pa., June 16, 2025 (GLOBE NEWSWIRE) -- Helius Medical Technologies, Inc. (Nasdaq: HSDT) ("Helius" or the "Company"), a neurotech company focused on delivering a novel therapeutic neuromodulation approach for balance and gait deficits, today announced an additional authorized claim for payment for the PoNS Device from CignaHealth. CignaHealth becomes the fifth major payer to authorize claims for payment for the PoNS Device following the recent authorization by Anthem MultiPlan.

"With approvals now secured from five major commercial healthcare payers, we are making significant progress increasing MS patient access to the PoNS device," said Dane Andreeff, Helius President and Chief Executive Officer. "Importantly, these out-of-network total lump sum reimbursement payments at over \$19,000, reinforce the value of PoNS while strengthening and supporting our ongoing efforts to achieve broader reimbursement from CMS and coverage across the healthcare landscape."

Depending on the individual's deductible and out-of-pocket costs, these claims may not result in an immediate PoNS Device sale.

About the PoNS Device and PoNS Therapy

The Portable Neuromodulation Stimulator ("PoNS") is an innovative, non-implantable, orally applied therapy that delivers neurostimulation through a mouthpiece connected to a controller and it's used, primarily at home, with physical rehabilitation exercise, to improve balance and gait. The PoNS device, which delivers mild electrical impulses to the tongue, is indicated for use in the United States as a short-term treatment of gait deficit due to mild-to-moderate symptoms from MS and is to be used as an adjunct to a supervised therapeutic exercise program in patients 22 years of age and over by prescription only.

PoNS has shown effectiveness in treating gait or balance and a significant reduction in the risk of falling in stroke patients in Canada, where it received authorization for sale in three indications: (i) for use as a short-term treatment (14 weeks) of gait deficit due to mild and moderate symptoms from stroke and is to be used in conjunction with physical therapy; (ii) for use as a short-term treatment (14 weeks) of chronic balance deficit due to mild-to-moderate traumatic brain injury ("mTBI") and is to be used in conjunction with physical therapy; and (iii) for use as a short-term treatment (14 weeks) of gait deficit due to mild and moderate symptoms from MS and is to be used in conjunction with physical therapy. PoNS is also authorized for sale in Australia for short term use by healthcare professionals as an adjunct to a therapeutic exercise program to improve balance and gait.
